PROFILE

Full-stack developer with three years of professional experience. I have been shipping software since early 2024 and running my own platform in production alongside it. I am currently technical lead support at MIGSO-PCUBED, where I own AWS deployment guidance across DEV, STAGE and PROD, wrote the platform's technical governance framework, and led its disaster recovery plan.

Outside that I build and run RepsDown, a fitness-coaching platform running in production. Angular 21 web client, Spring Boot 3.4 API on Java 21, React Native mobile app, PostgreSQL 17, and a Google Gemini assistant that answers from each user's own training and nutrition data. I designed it, wrote it, deploy it, and fix it when it breaks.

PROJECTS

RepsDown, Founder and Sole Engineer

repsdown.com · 2025 to present

Production platform for personal trainers to manage clients, training cycles, progression and nutrition.

- Built the whole stack alone: Angular 21 front end, Spring Boot 3.4 REST API on Java 21, React Native mobile app on Expo, PostgreSQL 17, all running as Docker containers.
- Integrated the Google Gemini API (gemini-2.5-flash, direct REST) as an in-app assistant grounded in real user data. It reads a user's workout and nutrition history to answer questions, and can trigger backend actions such as swapping an exercise that has stalled or proposing a training-cycle reset.
- Built roughly twelve structured-extraction endpoints on the same service: voice and photo food logging, nutrition-label OCR, diet-plan generation, weekly training insights, food-substitution ranking.
- Handled the parts that make an LLM feature survive production: JSON-schema-constrained responses, multimodal image input, automatic fallback to a lighter model on 429 and 503 with exponential backoff, truncation detection, per-user rate limits, and a hashed-input response cache.
- Validated every model-returned ID against the database before use, so the assistant cannot invent a food or an exercise that does not exist.
- Ran the delivery side too: GitHub Actions CI, staging deploys, monitoring, and incident response.

EXPERIENCE

Software Developer and Technical Lead Support

MIGSO-PCUBED · Seville (hybrid) · January 2026 to present

- Co-lead the technical workstream on an enterprise eDelivery platform, sharing lead responsibility with one other technical lead across a distributed team.
- Own AWS deployment guidance for DEV, STAGE and PROD, covering release process and environment parity.
- Wrote the platform's technical governance framework, covering architecture, security, RACI, scalability and disaster recovery, and presented it to director-level stakeholders.
- Led production of the Disaster Recovery Plan, coordinating a technical team and reporting to the project manager.
- Advise external teams on development and deployment practice, and drive incident resolution.
- Reviewed the platform's UI component licensing against upstream release cadence and recommended the option that keeps it on a supported version long term.

Front-End Developer and Project Manager

CodeArts Solutions · Remote · January 2025 to January 2026

- Built front-end features on live client software while coordinating delivery for multidisciplinary teams.
- Ran sprint planning, backlog refinement and delivery control, and presented progress to clients in recurring demos.
- Mentored developers in training through code review, technical guidance and onboarding documentation.

Earlier Roles, 2024

Development and QA placements, Seville and remote

- **PHP Web Developer, Diseloo Technologies** (November 2024 to January 2025). CakePHP feature work and bug fixing, working directly with the marketing team on user-facing issues.
- **Full-Stack Developer, Petinder** (September to November 2024, remote / Barcelona). Platform maintenance and new features, working alongside the design team.
- **Test Engineer, Stars League Fantasy** (September to November 2024). Jest test suites validating real-time results against live football matchday data.
- **Full-Stack Developer, Profile Software Services** (March to June 2024, remote). Built a meeting-room booking application in a seven-developer Kanban team using Java, Spring Boot, PostgreSQL, Angular, TypeScript and Docker.

TECHNICAL SKILLS

Languages: Java 21, TypeScript, JavaScript, PHP, SQL, HTML5, CSS3, SCSS

Front end: Angular 21, React 19, React Native, Expo, Tailwind, Astro, Bootstrap

Back end: Spring Boot 3.4, Node.js, CakePHP, REST API design

Databases: PostgreSQL 17, MySQL

Cloud and DevOps: AWS, Docker, Docker Compose, GitHub Actions, CI/CD, Git, GitHub

AI: Google Gemini API, JSON-schema structured output, multimodal prompts, rate limiting, response caching

Testing and tooling: Jest, Postman, Swagger, IntelliJ IDEA, VS Code, Figma

Ways of working: Scrum, Kanban, Jira, GitHub Projects, technical documentation

EDUCATION

Advanced Vocational Degree, Web Application Development (DAW)

Cesur Cartuja, Seville · 2022 to 2024

Java, JavaScript, PHP, Node.js, MySQL, agile delivery.

Advanced Vocational Degree, Microcomputer Systems and Networks

Cesur Cartuja, Seville · 2020 to 2022

Systems administration, networking and IT fundamentals.

Driving licences B and A2 · Available to travel and relocate
